Let Genesis Generate Revenue for Your Hotel / Motel

Let Genesis instantly turn your telephone system into a cash machine. Genesis will increase your revenues by automatically capturing guest telephone call information, calculating the costs, and applying your own unique set of surcharges, markups and taxes, plus more...

From 6 to 6000 rooms, Genesis has just the right system for you. Genesis has been a supplier of quality telemanagement products to the hospitality industry for more than 25 years. Genesis is the reliable, affordable solution already chosen by thousands of hotels. Whether you are allocating telephone charges to your hotel guests, monitoring telephone usage or tracking telephone abuse and fraud, Genesis puts you in command.

Call Accounting

Generate Revenue for Your Hotel / Motel

The sky is the limit with 9 different surcharge, markup, and tax tables. Genesis can apply surcharges to selected suites. In addition to long distance and operator assisted calls, Genesis allows you to set special pricing for individual overseas countries and other calls. Full audit and profit reporting show you just how much revenue Genesis Call Accounting is generating.

Consolidate Telephone Charges With Other Guest Charges

Genesis interfaces with most Property Management Systems available today, providing you with a fully integrated solution. Call data is captured, costed and transmitted automatically to your Property Management System.

Control Telephone Costs & Usage

Genesis Call Accounting performs real-time call processing so there is no waiting. Reports are ready when you need them. Genesis Call Accounting even retains calls so you still have access to a guest's calls months after they have checked out. Use Genesis Call Accounting to determine the most cost-effective combination of telephone lines, services and staffing. Genesis helps protect your telephone system from abuse and fraud by notifying you when a problem is detected.

911 Emergency Notification (for Nortel / Avaya Meridian & CS1000 Systems)

GenAlert alerts you immediately when someone at your hotel / motel dials 911. You need a solution that notifies you when a 911 call is placed so that when help arrives you can tell them exactly where they need to go. Often 911 calls are not terminated until an ambulance is on site. Standard call accounting only notifies you after the call was terminated, which could make finding the distressed person nearly impossible. GenAlert is available for some of the most common phone systems.

The Simple, Reliable Choice

Genesis eliminates the need for lengthy and expensive training programs. Genesis knows and will let you know if there is a problem with your system. Expert technicians are available to discuss whatever questions or concerns you may have.
